

# The LBCC Biology Club

Spending their spring break  
working on a Revegetation  
Project for the National Park  
Service

Setting up camp at Wawana  
Campground in the southwest  
corner of Yosemite

Orientation at the  
NEW Mariposa Grove  
visitor station

Scheduled to open to  
the public in June

LBCC students spent 3 days (of hard labor) planting trees around the new visitor center.

The construction of a new parking lot for Mariposa Grove is finished, so now we are going in to replant native trees to match the surrounding forest.

Dogwood  
Incense Cedar  
Ponderosa Pine  
White Fir  
Sugar Pine  
Valley Oak  
And others

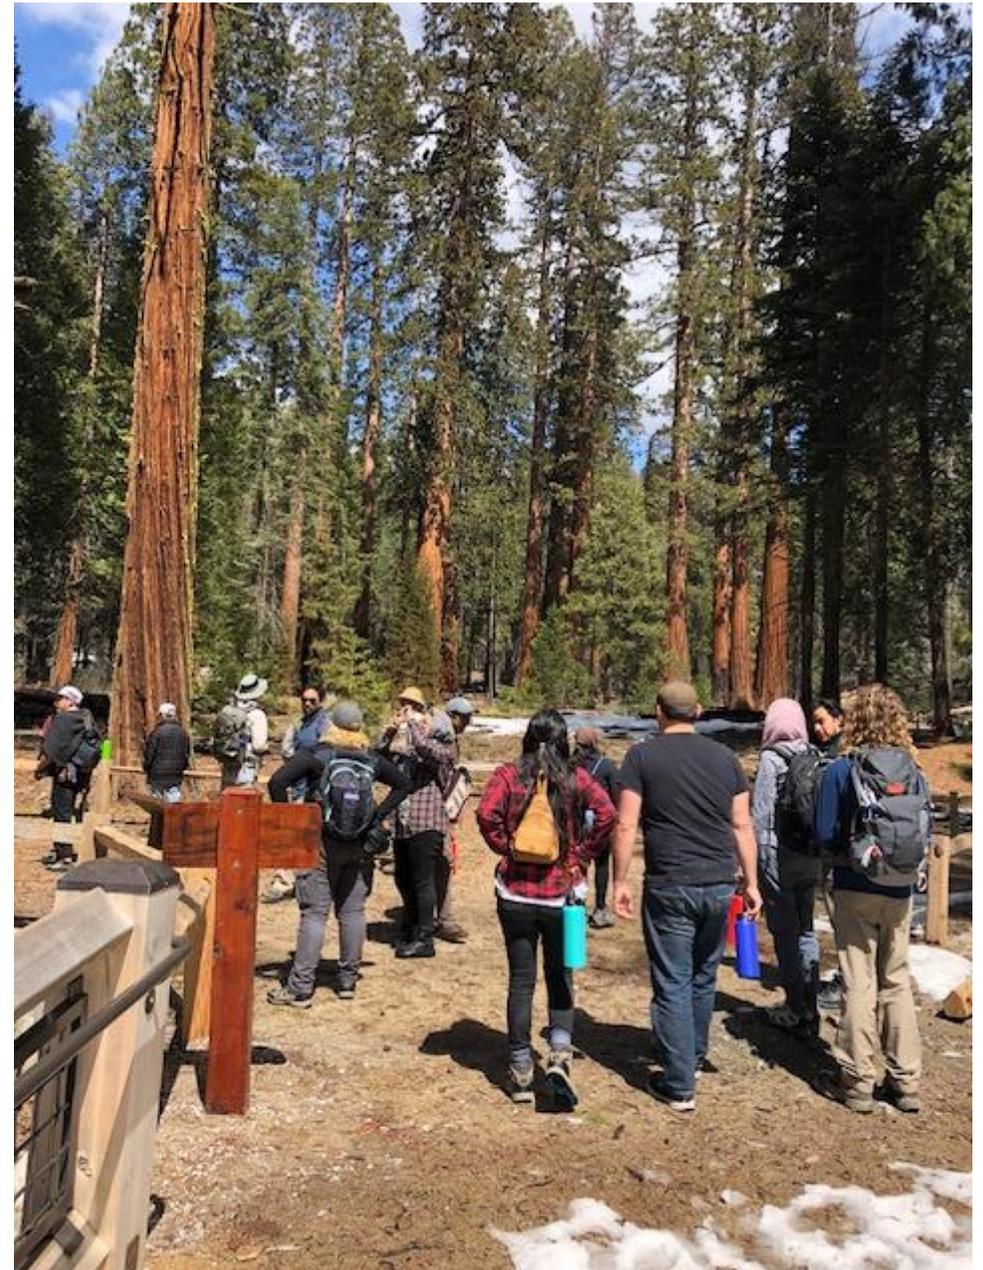

Some of the trees had to be caged so deer can't eat them and shaded from the sun until they become established.

We had to build a temporary nursery to keep deer out of the plants until they can get planted.

We did a lot of exploring and hiking in our down time.

Notice that the LBCC vans are the only vehicles in the Mariposa Grove parking lot.!

The LBCC Biology Club is very proud that they planted trees in Yosemite that will be enjoyed by many future generations.
